GX41: for quick inspections at the production site

Compact, practical design offering all necessary functions for inspecting metallurgical samples, large metal parts and electronic components
New advances in both imaging and functionality

Featuring the brighter, clearer visibility of UIS optics, and the convenience of observation with instant image recording.

Clear, bright observation at all magnification levels

- Newly improved inspection efficiency thanks to UIS infinity-corrected optics, which allow high-clarity observation with flat, bright, even images right to the edge of the visual field (F.N.22)*.
  * When using eyepiece WH10x series.
- To meet high-magnification observation requirements, magnification settings extend from 5x to 100x.
- Suitable for both brightfield and simple polarizing observations. The polarizer can be rotated through 90°, allowing optimum contrast control.
- As well as the standard 6V 30W halogen lamp, users can select a 100W fiber light source, high-brightness images, even of dark samples.
- Reflected light illuminator with aperture stop. Optimum contrast is obtained according to objective magnification and observation method. Handy filter pockets are provided, as various types of f25 filters can be used besides the polarizer.

Easy observations while standing or sitting

- Different types of tilting binoculars are available, so the tilting angle can be freely changed. Observations can be made quickly and easily, even while standing.
- The 6V30W halogen lamp is pre-centered, making manual centering unnecessary.
- The coaxial coarse and fine focus handle enables focusing without changing hands.
- The revolving nosepiece accepts four objectives, allowing quick exchange among them.
- With the optional stage mirror (CK40M-MS) attached, the user can easily confirm the observation position of the sample (and the objective in use) by only a slight shift of the eye, from the eyepiece to the mirror.

Any size of sample can be comfortably observed

- The plane stage enables observation of thicker/larger samples (more than ø50mm), while the mechanical stage allows extremely precise movements.
- The mechanical stage is attached to the left/right side of the plane stage, according to the operator’s dominant hand. A stage plate and plate holder are included.
- A special stage insert plate (IX-CP50) is provided for samples of over ø100mm diameter.
Fast, easy image recording

• Users can attach a digital microscope camera like the DP12, a video camera or the automatic photomicrography system PM10SP via an intermediate attachment or trinocular tube.

• An adapter for attaching an Olympus Camedia digital camera to the binocular tube is also available.

Easy installation by the production line and easy to carry

• The compact, easy-to-use GX41 can be installed in a limited space, making it suitable for on-the-spot inspections close to production lines.

• Light and easy to carry, the GX41 is ideal for moving between manufacturing site, classroom or practice location.

Easy system expansion according to need

• UIS optics are especially suitable for system expansion. Using optional intermediate attachments does not cause any image deterioration.

• The GX-SPU adapter enables attachment of a digital camera or video camera while using the binocular tube.

• Dual observation attachment U-DO3 allows two people to observe the same image at the same time.

• Intermediate magnification changers U-CA (1.25x, 1.6x, 2x) and U-ECA (2x) let users select intermediate magnifications without changing objectives.

• Drawing attachment U-DA enables easy, accurate drawing; the tip of the pen can be seen through the binocular tube.
Quick compliance with various kinds of measurements, e.g. grain size

* An eyepiece micrometer and grain scale are provided.

System Diagram

*1) When combining TV1x adapter and U-TCR30-2, use TV1x-2.  
*2) When combining GX41-EPA or CKX-TBI, disconnect the adapter attached to GX41F.
